

ZEPHYR – 2024

Creative and Art Designing

Tattooing is the process of creating permanent or temporary designs on the skin using ink and a needle. A tattoo artist typically uses a tattoo machine to inject ink into the skin's dermis layer, creating intricate and detailed designs.

Nail painting, also known as nail art, involves decorating and embellishing the fingernails and toenails with various designs, colors, and textures.

Face painting involves applying pigments, paints, or makeup to the face to create decorative designs, patterns, or characters. It is commonly used for artistic expression, cultural celebrations, theatrical performances, festivals, parties, and children's entertainment.
